Professional Summary

Most of my work is finding arithmetic bugs in code that holds other people's money, then writing the proof that stops anyone from waving them away.

Across 60+ bug bounty programs on HackenProof, Cantina, Bugcrowd, Intigriti and Immunefi — 20+ of them smart contract audits — the findings I am proudest of are arithmetic. An underflow in Frax's `sfrxETH` withdrawal path, where a cached `totalAssets` drifts against the live figure and strands LP redemptions. A payout path in `tokenize.it` where a caller-supplied base price lets a co-investor walk off with an entire exit. Both ship as runnable Foundry proofs-of-concept, the `sfrxETH` one verified against a live mainnet fork. I run audits with AI agents in parallel lanes across governance, ledger and write-path surfaces, then verify every claim by hand.

A large share of that work ends with me not filing. Three of my own reports were closed by triagers, two as intended behaviour, so I work to a written gate that stops me filing anything a privileged role could reach — and I built the tooling around it: `c0bw3b`, a 13,000-line Python pipeline with 31 decorator-registered modules and 107 passing tests, MIT licensed and installed as a CLI.

I build as much as I break. C. Sambu Farm Manager replaced the physical payroll workbook of a tea estate running 20–30 pluckers and 12–39 tonnes of green leaf a month, pricing piece-rate, day-rate and prorated pay in one engine. Maziwa Coop sends dairy farmers their delivery confirmation by SMS and generates the month-end statements they used to write by hand. The CRUD was never the hard part — the domain was: a feed-ration solver built on KALRO nutrient tables, tea factory rates that change by effective date, and dates that stay correct in EAT.

I also take paid incident response and forensics on WordPress estates, and build lead pipelines on Cloudflare. I run teams across media, education and tech, so I can sit with a farmer over their deduction statement and with an auditor who thinks their finding will not pay.

Technical Skills

Security & Auditing	Smart contract auditing, vulnerability research, penetration testing, threat modeling, code review, responsible disclosure, OWASP Top 10, digital forensics, IDOR/BOLA, XSS (stored/blind), SQLi, SSRF, CORS/CSRF
Blockchain	Solidity, Foundry, Hardhat, Slither, Mythril, Echidna, EVM internals, proxy patterns (UUPS/Transparent), ERC-4626, cross-chain bridge security, ERC-8004, ERC-4337
Languages	TypeScript, JavaScript, Solidity, Python, Bash, Dart
Fullstack	React 18/19, Next.js, Node.js, Hono.js, Express.js, RESTful APIs, Web3.js, Ethers.js, Viem, Zustand, Recharts, Tailwind CSS, Flutter
AI & LLMs	Claude API (Sonnet 3.5/4), Groq API, Gemini, MCP (Model Context Protocol), Agentic AI Orchestration, Prompt Engineering, Deepseek, NVIDIA NIM, Llama 3.3 70B
DevOps & Infra	Git, Docker, Foundry, JIRA, Trello, CI/CD, Cloudflare Workers, Cloudflare Pages, Cloudflare D1/KV/R2, Wrangler CLI, Netlify, Supabase, Vercel, Postman/Newman
Other	Linux, macOS, Windows, DaVinci Resolve, OBS Studio, Google Workspace, Microsoft Office, Notion, Linear

Independent Security Research

Security Researcher & Bug Bounty Hunter — Independent

2024 – Present

- Audited 20+ smart contract codebases (Frax, Paxos, USDai, Cetus, Revert, Alberich, Zendex, DreamX) and worked 40+ Web2 programs on HackenProof, Cantina, Bugcrowd, Intigriti and Immunefi.
- Reported an arithmetic underflow in Frax's `sfrxETH` withdrawal path (cached `totalAssets` drift stranding LP redemptions) and a caller-supplied base price in `tokenize.it`'s exit payout draining 100% of proceeds; both shipped as runnable Foundry PoCs, the first verified against a live mainnet fork.
- Found a critical blind stored XSS executing inside an internal backoffice exposing national IDs and phone numbers, and an IDOR in a B2B platform that was triaged and rewarded.
- Built the verification stack: Foundry, Hardhat and Sui test suites, mainnet forks, gas measurement, on-chain state reads, plus a standing

filing gate that keeps privileged-role findings out of the queue before review.

- Ran audits with AI agents in parallel lanes across governance, ledger and write-path surfaces; confirmed every claim by hand; wrote triage-ready reports with severity classification, root cause analysis, remediation steps, and dismissal vectors already considered.

Key Projects

Full portfolio with live links: llakterian.github.io

Maziwa Coop — Milk Cooperative Management System maziwa-coop.pages.dev

Production platform for Kenyan dairy cooperatives replacing paper delivery records with daily milk logging, auto-generated ticket numbering, Africa's Talking SMS confirmations to farmers, milking-can credit tracking, and CSV reporting. SMS provider abstracted for zero-core-change swaps. Stack: React 19, Hono.js on Cloudflare Workers, D1, Zustand, Recharts.

C. Sambu Farm Manager — Full-Stack Farm Management PWA Live API

PWA for a multi-sector Kenyan agribusiness (tea, dairy, avocado, poultry) replacing a physical payroll workbook (20–30 pluckers, 12–39t green leaf/month). Single payroll engine prices piece-rate (KES 9/kg), day-rate and prorated salary. Feed-ration solver on KALRO nutrient tables, effective-dated tea factory rates, Open-Meteo weather across 14 Kenyan regions, Workbox offline caching. Migrated IndexedDB/FastAPI/Docker to Cloudflare Workers + D1.

Shambani — AI Agronomy & Weather Advisory shambani-app.pages.dev

Weather intelligence for all 47 Kenyan counties: current conditions, 7-day forecast, AI agronomic advice grounded in KALRO, Tea Research Foundation of Kenya, and Ministry of Agriculture extension guidelines, plus livestock feed profiling. API keys server-side behind single proxy chokepoint, 5-min cache with stale-on-error fallback. Stack: FastAPI + Cloudflare Pages Functions, Groq (gpt-oss-20b), Open-Meteo, vanilla-JS PWA.

QuitVaping — AI Cessation Platform quitvaping.netlify.app

Production Flutter web PWA for nicotine cessation: abstinence tracking, health-recovery timeline, savings calculator, AI coach, craving-pattern analysis, guided panic-mode breathing, NRT tracking, community support, monetised via RevenueCat. Full MCP client stack, Supabase backend with edge functions and web push. 36k lines Dart across 117 files, Postman/Newman API test suite.

c0bw3b Toolkit — Automated Reconnaissance & Vulnerability Scanner

Custom automated scanning pipeline for Web2 bug bounty. 13,000 lines Python across 31 decorator-registered modules: passive/active recon, JavaScript secret extraction, port scanning, historical URL collection (Wayback, CommonCrawl), CORS/IDOR/SQLi/SSRF detection, false-positive verification, attack-chain correlation. 107 passing tests. MIT licensed, installs as `c0bw3b` CLI.

FinPro — Decentralized Project & Finance Platform

Client delivery: escrow-based payments, ERC-20 token, swap module, multisig treasury, EIP-4337 gasless accounts with token paymaster, Telegram Mini App. 7 audited Solidity contracts, 33 passing Hardhat tests, Playwright E2E coverage; Supabase with RLS, Stripe checkout, TON sidechain data registry.

BotIn — Decentralized AI Agent Network

Decentralized AI agent professional network utilizing ERC-8004 for agentic identities, on-chain reputation, and XMTP messaging.

NimbusTrade — Web3 Arbitrage Dashboard

Web3 arbitrage dashboard combining Polymarket CLOB APIs and Gemini-powered Expected Value logic.

PicKut AI — AI Image Editing Suite

Professional image editing suite powered by Gemini 2.5 Flash Image, featuring ERC-8004 agentic Web3 payments and gasless subscriptions over EIP-4337.

Uplift News — Multi-Language News Platform

Multi-language platform with React, Cloudflare Workers, D1, and Groq AI for bilingual English/Swahili content curation. Installable PWA with push notifications.

Professional Experience

Technology Consultant & Developer — Self-Employed

Sep 2023 – Present

- Built and deployed production full-stack applications (Maziwa Coop, Sambu Farm Manager) on Cloudflare's serverless edge with JWT auth, RBAC, and live D1 schema migrations.
- Paid incident response and forensics on WordPress estates: recovered client across four outages, removed PHP webshell and eight hidden admin accounts, rotated salts, cut TTFB from 30s+ to 1.1s.
- Architected lead pipeline connecting Meta Lead Ads to CRM via Cloudflare Workers + KV, with Zapier bridge around Meta's App Review restriction on direct lead webhooks (deduplication, 90-day audit trail).
- Engineered and audited Solidity contracts using Slither, Mythril; reduced exploit risk surface by 40%.
- Created blockchain security educational content on TikTok (@tech_ale).

Project Manager — SIZLAND Limited

Nov 2025 – Mar 2026

- Orchestrated Agile/Scrum workflows in Web3 environment via JIRA and Trello; optimized task allocation and sprint delivery.
- Delivered 39k-line content curation platform and notary-mediated escrow system with smart contracts, front-end ABIs, handover documentation.
- Anticipated and mitigated project risks, conflicts, and cross-team dependencies; directed stand-ups, sprint reviews, retrospectives; liaison between developers, executives, and external partners.

Indie Game Developer (Charity Project) — Jampack Incubator

Feb 2026

- Developed and launched Mathlantis, educational web application combining math challenges with puzzle-building mechanics for Games for Love.
- Awarded "Most Child Friendly Game" title badge for accessible and engaging design.

Director and Manager — Sambu Academy

Aug 2022 – Present

- Directed educator teams delivering high-impact operations and upholding elite service standards.
- Implemented streamlined SOPs that boosted overall productivity by 30%.

Media & Production Experience

Technical Director & Firm Manager — KASS Media

Feb 2019 – Apr 2023

- Led technical operations, logistics, and firm management over multi-year tenure at a major Kenyan media station.
- Studio production, live broadcast direction, post-production editing (DaVinci Resolve, OBS Studio), camera operations, sound design, graphics, and multi-camera switching.
- Managed technical budgets, equipment procurement, vendor relationships, and cross-departmental workflows for daily news, entertainment, and special event productions.
- Trained and mentored junior technical staff; established equipment maintenance SOPs reducing downtime by 40%.

Manager: Logistics, Building and Construction — KASS Media

Feb 2019 – Aug 2022

- Oversaw facility management, construction projects, and logistics for media studio operations.
- Coordinated vendor contracts, procurement, and compliance with broadcast regulations.

Passenger Handling Agent — Swiss Port Kenya Ltd

Aug 2011 – Dec 2011

Public Relations Attaché — KEMSA

2011
